Remarks

Evaluation of the sample according to BNN (Bundesverband Naturkost Naturwaren e.V.):
 BNN adopted an orientation value for residues of plant protection products of 0.010 mg/kg on 3rd of April 2001.
 No more than a total of two pesticides may be present as long as these are technically unavoidable contamination and there are no other indications for violation of relevant organic farming legislation.
 This applies only to substances with a residue level above or equal to 0.010 mg/kg (laboratory result without adjustment for analytical variance, if applicable corrected with a processing factor).
 This orientation value applies to the original unprocessed product.
 According to BNN specifications, the residue in a processed product must be calculated back to the unprocessed product, as long as there are reliable processing factors for the product. In this sample a processing factor of 10 can be used according to customers information.
 This evaluation is therefore subject to this reservation.

In the present sample, the following residues of plant protection products were detected:
 - Anthrachinone with a concentration of 0,015 mg/kg. Taking into account the processing factor, that would indicate a concentration of 0,0015 mg/kg in the unprocessed product.

This level do not exceed the orientation value, taking into account the extended measurement uncertainty of 50% (SANTE / 11813/2017).

It is recommended to check for a technically unavoidable contamination or if relevant organic farming legislations have been violated.

On the part of the BNN, regarding the orientation value, it is noted that irregularities and offense against existing rules and regulations for organic production only can be declared by the responsible inspection bodies and regulatory authorities.
